

PyraCloud Platform | Software Licensing Management

Software Licensing Management helps customers manage the compliance of their software entitlements. The Software Licensing Management has 4-key functions EA True-up, Risk Profiler, Electronic Software Distribution and a compliance usage check service using the EULA database.

> EA True-UP

The EA Reporting allows organizations the ability to globally collaborate to improve internal collection and reporting for products associated with the Microsoft Enterprise Agreements.

> Risk Profiler

SoftwareONE service that analyzes the top 5 software publishers to determine which publishers have a high risk to be audited. The results of the Risk Profiler are exposed and viewable by PyraCloud customers.

> Electronic Software Distribution

PyraCloud's download center enables the download of media kits and electronic software (standard ISO packages) from multiple publishers, and keeps them in a central repository that already manages all licensing information. The Download Center establishes a centralized management of and controlled access to media, ensuring fast and successful downloads, and access to older versions.

> EULA Database and Compliance Usage Check

Access the EULA database (Over 3000+) and compare compliance to EULA utilizing a usage checklist.

SoftwareONE Advantage

The combination of PyraCloud platform and SoftwareONE services enable organizations to effectively implement software and cloud portfolio management. SoftwareONE service offerings such as Software Procurement Services (SPS), Software Asset Management (SAM) Services and Technology Solutions (TS) will help organizations maximize the value of their entire software and cloud portfolio. Once the services are implemented, PyraCloud enables organizations to continue the benefits of SoftwareONE services by providing a framework for Software Portfolio Management.
