

SOFTWAREONE PYRA CLOUD PLATFORM

Base Management Module

Many organizations procure and manage software in a distributed and manual manner. The PyraCloud platform Base Management Module provides intelligent software management for global software procurement, reporting, and license agreement management, enabling the ability to maximize volume purchasing leverage, streamline orders and invoicing, and manage compliance risk.

The Base Platform Module automates and streamlines the overall software portfolio management by:

- Procuring software through a single platform
- Leveraging competitive pricing through global sourcing capabilities
- Managing licenses for consistent and accurate reporting
- Access to local and global SoftwareONE License Experts to address regional challenges
- Accessing license entitlements

GLOBAL CATALOG

PyraCloud provides organizations with unique catalog, which customizable with specific, supported products, from a list of over 9000 available publishers. This catalog can be used to create enterprise approved shopping lists and software packages. By leveraging this capability, an organization can minimize its software procurement costs by standardizing on approved software packages and negotiating global pricing with a view of favorable currencies and taxes.

Additionally, using the catalog, an organization can enforce corporate standards by presenting users and global leaders with an approved list of products.

QUOTES, ORDERS, INVOICES

PyraCloud provides a centralized view of all your organizational quotes, orders, and invoices. Quotes can be created using the approved software catalog options or through an integrated eProcurement platform. By integrating with eProcurement systems, an organization can drive a centralized quote and order process for software procurement.

Additionally, PyraCloud consolidates invoices on a regional or global basis. This creates efficiencies within the quotes, orders and invoice process, reducing the level of resources needed to effectively manage and report on the software estate. PyraCloud provides a single view into all the open invoices, filtering the invoices by country, business unit, cost center, and more to develop a clear view on global and business unit spend.

LICENSE MANAGEMENT

Track start, end, and renewal dates of license agreements along with contracts, license keys, training vouchers, and other supporting documentation. Users view their contracts in a graphical timeline view of agreements and a detailed, list view that includes green, yellow, and red "status" symbols, providing a visual checkpoint and ensuring that key dates and activities around specific agreements visible. Additionally, tailored alerts provide visibility to key dates and required activities to maintain compliance.

SOFTWAREONE ADVANTAGE

The combination of PyraCloud platform and SoftwareONE services enable organizations to effectively implement software and cloud portfolio management. SoftwareONE service offerings such as Software Procurement Services (SPS), Software Asset Management (SAM) Services and Technology Solutions (TS) will help organizations maximize the value of their entire software and cloud portfolio. Once the services are implemented, PyraCloud enables organizations to continue the benefits of SoftwareONE services by providing a framework for Software Portfolio Management.
